

Skills Governance Audit

Consolidation Plan & Gap Analysis

1. Duplication Matrix

Y = present in skill, N = absent. Recommended sole owner shown in Section 5.

Rule	arch	domain	safe	test	state
Project mission (not a screener)	Y	Y	N	N	Y
Transactions = source of truth	Y	Y	N	N	Y
Never bypass transaction history	Y	Y	N	N	Y
Portfolio data flow diagram	Y	N	N	N	Y
Holdings are derived	Y	Y	N	N	Y
Allocation = reporting layer only	N	Y	N	N	Y
Portfolio accounting txn types	Y	N	N	N	Y
Currency: convert first then aggregate	Y	Y	N	N	Y
Supported currencies (SAR/USD/AED/EUR)	Y	Y	N	N	N
Market data must go through layers	Y	N	N	N	Y
Saudi routing (prefer SAHMK, fallback Yahoo)	Y	N	N	N	N
Research modules are read-only	Y	Y	N	N	N
MVP tier priorities	Y	N	N	N	Y
Safe zones component list	Y brief	N	Y full	N	Y brief
Review First Mode (full checklist)	Y full	N	N	N	Y partial
Change mgmt checkpoint format	Y	N	N	N	N
Test count must never decrease	Y	N	N	Y	Y
Test categories list	Y 10	N	N	Y 11	N
Filter rule (filters != accounting)	N	Y	Y	N	N
Risk classification P0-P4	N	N	Y	N	N
Escalation rule	N	N	Y	N	N
Minimal change principle	N	N	Y	N	N
Mobile First	Y	N	N	N	N
Roles (PM/Architect/Engineer)	Y	N	N	N	N
Mandatory loading sequence	N	N	N	N	Y
Test runner registration rule	N	N	N	Y	N
Failure/completion rule	N	N	N	Y	N

Duplication summary by skill:

Skill	Duplicated rules	Unique rules
bousala-architecture	14 duplicated elsewhere	5 unique
bousala-investment-domain	8 duplicated elsewhere	3 unique
bousala-safe-zones	2 duplicated elsewhere	4 unique
bousala-test-protocol	2 duplicated elsewhere	5 unique
bousala-project-state	13 duplicated elsewhere	3 unique

2. Conflict Matrix

ID	Severity	Description
----	----------	-------------

CASH test category in test-protocol but absent from architecture. Architecture lists 10 categories; test-protocol lists 11 (adds CASH). Cash is Tier 1 critical yet architecture skips its test category.

Generated: 2026-06-01 | Read-only analysis. No files modified.

SAHMK described as 'Planned' in project-state but treated as existing protected zone in architecture and safe-zones.
SAHMK is already fully implemented and tested. project-state is stale on this point.

Bousala Investor Compass -- Skills Governance Audit

Generated: 2026-06-01 | Read-only analysis. No files modified.

C3

Bousala Investor Compass -- Skills Governance Audit

Generated: 2026-06-01 | Read-only analysis. No files modified.

Low

Bousala Investor Compass -- Skills Governance Audit

Generated: 2026-06-01 | Read-only analysis. No files modified.

Review First output fields differ. architecture omits 'recommendation' and 'architecture impact' as explicit fields; project-state includes both. Different sessions produce different review formats.

Generated: 2026-06-01 | Read-only analysis. No files modified.

Low

Bousala Investor Compass -- Skills Governance Audit

Generated: 2026-06-01 | Read-only analysis. No files modified.

Approval trigger phrase 'Proceed with implementation' defined in architecture but no skill clarifies whether shorter phrases (ok, yes, go) are valid triggers. Caused ambiguity in practice.

Bousala Investor Compass -- Skills Governance Audit

Generated: 2026-06-01 | Read-only analysis. No files modified.

C5

Bousala Investor Compass -- Skills Governance Audit

Low-Med

Bousala Investor Compass -- Skills Governance Audit

Generated: 2026-06-01 | Read-only analysis. No files modified.

Filter rule: safe-zones says 'visibility/reporting/chart/table scope'; investment-domain says 'UI and reporting only'. Neither explicitly covers session state keys -- root cause of the alloc_ms_market multi-session conflict that required 3 sessions to resolve.

Generated: 2026-06-01 | Read-only analysis. No files modified.

3. Governance Gap Analysis

Gaps ranked by likelihood of causing a real future defect.

ID	Likelihood	Impact	Description
G1	High	High	Session state ownership rule absent. No skill prevents two UI controls sharing one session state key. The alloc_ms_market conflict required 3 sessions to resolve and WILL recur for any new filter pair.
G2	Med	High	dev_test_runner.py not listed as a protected zone. Removing or weakening existing tests has no escalation path. Test governance can be silently broken.
G3	Med	High	No portfolio data schema change governance. No backward-compat rule or migration requirement when holdings.json or any data file gains, loses, or renames a field.
G4	Med	Med	No post-implementation app validation checklist. Source-inspection tests can pass while the running app is broken. No rule requires: restart workflow, open preview, verify KPI values consistent.
G5	Med	Med	No breaking change definition. Removing a function, changing a calculation output, altering exported data structure -- none have a classification or approval path beyond generic Review First.
G6	Low-Med	Med	Approval phrase ambiguity. No skill defines whether 'ok', 'yes', 'approved', or 'go' are valid triggers for implementation. 'Proceed with implementation' is the only named phrase.
G7	Low	Med	No rollback governance. Skills say create checkpoint but give no rule for when rollback is appropriate or who approves it.
G8	Low	Low	Mobile First rule buried inside architecture with no prominent placement. Easily skipped.

4. Context Efficiency Analysis

Total lines currently loaded per full session: 1,077. Estimated duplicate content: ~380 lines (35%). Recommended ceiling after consolidation: 700 lines total.

Skill	Lines	Load freq	Risk red.	Cost	Maint.	Classification
bousala-architecture	387	Every session	High	High	High	Valuable -- overloaded
bousala-investment-domain	161	Domain Qs	High	Low	Low	Essential -- high ROI
bousala-safe-zones	155	Every impl.	High	Low	Low	Essential -- highest ROI
bousala-test-protocol	136	Every impl.	High	Low	Low	Essential -- high ROI
bousala-project-state	238	Every session	Med	High	High	Valuable -- needs trimming

Balance assessment answers:

- Q: Are skills likely to increase token consumption significantly? A: YES. 1,077 lines is 35% above the recommended ceiling.
- Q: Is current skill count appropriate? A: YES. Five skills at the right scope is correct. Problem is content overlap, not count.
- Q: Recommended maximum governance skills at current MVP stage? A: 5 skills, <=150 lines each, <=700 lines total.
- Q: Which skill provides highest ROI? A: bousala-safe-zones. Unique content (P0-P4, escalation), low cost, loaded every session.
- Q: Which skill provides lowest ROI? A: bousala-project-state in its current form. 80% is restatement of other skills.
- Q: What governance info should remain in skills? A: Rules that change agent BEHAVIOUR: Review First, safe zones, test protocol, domain model.
- Q: What should move to documentation? A: Project history, feature roadmap, changelog, implementation notes -- none of these belong in skills.

5. Recommended Ownership Map

Target state: each rule lives in exactly one skill.

Rule class	Sole owner

6. Exact Sections Recommended for Future Removal / Consolidation

From bousala-architecture (remove 4 sections, --80 lines):

- Remove 'Single Source Of Truth' -> sole ownership moves to investment-domain
- Remove 'Safe Zones' (brief list) -> already owned in full by safe-zones; brief duplicate adds drift risk
- Remove 'Testing Rules' -> already owned in full by test-protocol (fix CASH omission there first)
- Remove 'Currency Rules' -> sole ownership moves to investment-domain

From bousala-project-state (remove 9 sections, --170 lines):

- Remove 'Current Architecture Principles' -> owned by architecture
- Remove 'Portfolio Data Flow' -> owned by architecture
- Remove 'Portfolio Accounting Rules' -> owned by investment-domain
- Remove 'Source Of Truth' -> owned by investment-domain
- Remove 'Currency Rules' -> owned by investment-domain
- Remove 'Market Data Architecture' -> owned by architecture
- Remove 'Safe Zones (brief)' -> owned by safe-zones
- Remove 'Current Governance Rule' -> owned by architecture (Review First section)
- Remove 'Test Governance' -> owned by test-protocol
- KEEP: Purpose, Mandatory Loading Rule, Project Name, Product Vision, Current Dev Stage, Long-Term Goal
- Result: project-state shrinks from 238 lines to approximately 65 lines

From bousala-investment-domain (remove 1 section):

- Remove 'Research Separation' -> architecture owns 'Research Rules'. Keep one, delete the other.

7. Risks If We Do Nothing

Probability	Risk	Consequence
High over time	Rule updated in one skill but not its duplicates	Agent loads contradictory rules; behaviour unpredictable
Exists NOW	SAHMK 'Planned' in project-state	Agent may skip SAHMK safe-zone protection
Exists NOW	CASH absent from architecture test list	Agent skips cash regression coverage
Exists NOW	Review First format diverges	Inconsistent review output across sessions
High	Session state gap G1 unaddressed	alloc_ms_market class of conflict repeats for any new filter pair
Med	dev_test_runner.py unprotected	Test count can drop silently; governance broken

8. Risks If We Consolidate Now

Probability	Risk	Mitigation
Low-Med	Edit introduces an omission	A rule is lost in merge; mitigated by careful diff review before each edit
Low	Frontmatter trigger breaks	Agent stops loading a skill; mitigated by updating descriptions simultaneously
Low	project-state becomes too thin	Loading sequence loses authority; keep it as the primary purpose of the file
Med	One session consumed	One-time investment; not a recurring cost

9. Recommended Maximum Governance Footprint

- Maximum 5 skills at current MVP stage
- Maximum 150 lines per skill after consolidation
- Maximum 700 lines total loaded context per session
- Current: 5 skills, 1,077 lines -- 35% duplication
- After consolidation: 5 skills, estimated 650-680 lines -- within ceiling

Bousala Investor Compass -- Skills Governance Audit

Generated: 2026-06-01 | Read-only analysis. No files modified.

- Consolidate content inside existing skills. Do NOT reduce skill count.

10. Recommendation: Consolidate Some Skills

The five-skill structure is correct and the boundary definitions are sound. The problem is that content migrated into new skills was not removed from old ones, so duplication accumulated. Recommended action: targeted removal of identified duplicated sections only -- not a full rewrite. Estimate: one focused session.

Skill Classifications:

Skill	Classification	Rationale
bousala-safe-zones	Essential -- Highest ROI	Unique (P0-P4, escalation, minimal-change). Low cost, loaded every implementation.
bousala-test-protocol	Essential -- High ROI	Unique (runner rules, failure rule, completion rule). Low cost, every implementation.
bousala-investment-domain	Essential -- High ROI	Unique domain model. Low cost. Critical for accounting correctness decisions.
bousala-architecture	Valuable -- Needs trimming	Owns Review First (high value) but carries 4 sections that duplicate dedicated skills.
bousala-project-state	Valuable -- Needs significant trimming	80% restatement. Unique value = loading sequence + 3 items only.

Prioritised action list (do not implement until explicitly confirmed):

Priority	Effort	Action
P1	Trivial	Add CASH to architecture test category list (one line)
P2	Trivial	Correct SAHMK status in project-state from 'Planned' to 'Implemented'
P3	Low	Add session state ownership rule to safe-zones (closes G1 -- highest-likelihood future defect)
P4	Trivial	Add dev_test_runner.py to safe-zones protected zone list (closes G2)
P5	1 session	Strip project-state of 9 restated sections; reduce from 238 to ~65 lines
P6	Low	Remove 'Safe Zones' and 'Testing Rules' sections from architecture (already owned by dedicated skills)
P7	Trivial	Remove 'Single Source Of Truth' from architecture; investment-domain owns it
P8	Trivial	Unify Review First fields: add 'recommendation' + 'architecture impact' to architecture checklist
P9	Low	Add post-implementation app validation checklist to test-protocol (closes G4)

End of report. No files were modified. All recommendations require explicit approval before implementation.
